6 WAYS TO INSTALL FORUM

Different mounting options allows the FORUM LED panel to meet any design requirements.

LAY-IN

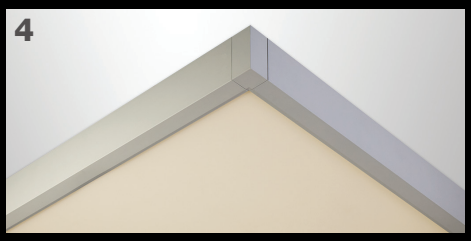
A standalone FORUM panel installs onto conventional drop-ceiling grid systems – no additional assembly required.

RECESSED

Flexible spring clips make installation easy when mounting the FORUM panel into drywall ceilings. The springs quickly retract to hold the fixture in place.

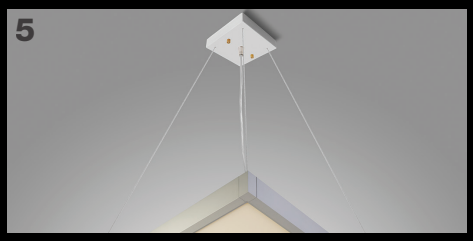
TRIMLESS ADAPTER

Designed to provide a true trimless recessed application in drywall ceilings. These frames give the FORUM a premium look and feel with no sightline interruption.



SURFACE MOUNT

Convert the FORUM panel to a low-profile surface mount fixture and wire to an existing junction box – a perfect alternative when working with finished ceilings. Suitable for tandem row mounting



SUSPENSION

This four-point suspension kit with power cord lets you mount the FORUM panel up to 8-feet from the ceiling height to create a modern, open concept space – no time-consuming leveling.

FORUM FRAME SYSTEM

The FORUM surface mount kit and suspension kit combine to create the FORUM Frame System, a flexible tool for creating architectural spaces*. These framing elements give you the ability to transform the ordinary into extraordinary.

It allows for the integration and combination of lighting and acoustics tiles, as well as the introduction of fabric or millwork design elements to create a single flexible designer system.

* Use FORUM layout tool to generate architectural bay design.
